

Category importing is similar to product importing. Here is an example of a working import file with the minimum required fields - note that the 'url_path' field is used to determine how categories are arranged in the catalog.

```
is_active,name,url_path
Yes,"Hats",hats.html
Yes,"Top Hats",hats/top-hats.html
Yes,"Wide Hats",hats/wide-hats.html
Yes,"Silk Top Hats",hats/top-hats/silk.html
Yes,"Goggles",goggles.html
```

This produces this layout:

```
Default Category
|-> Hats
|   |-> Wide Hats
|   `-> Top Hats
|       `-> Silk Top Hats
`-> Goggles
```
